Monarch Consortium Field Data Site Form DUN 2	1
Date: 6-27 Location: Anart Monitor: Tem Tess	
Start Time: 1 : 20 PM End Time: 2 : 15 PM	
Butterfly Start Time: : 30 PM Butterfly End Time: : 90 PM	
Temp: 85 F°/C°	
Vind: (circle one) Calm (Light) Moderate Very Windy	
Clouds: (circle one) Clear Mostly Clear Mostly Cloudy Cloudy	
andscape Sampling:	
s milkweed present? Yes No Estimated number:	
lowering plants? No Estimated number:	
ype of habitat: Agriculture Wooded Waste Area Pasture	
Definitions	

Wind

Calm: 0 mph, Smoke rises vertically

Light: 1-3 mph, Wind direction shown by smoke, but not by wind vanes

Moderate Breeze: 13-17 mph, Raises dust and loose paper; small branches move

Windy: 25+ mph, Large branches move

## Clouds

Clear: No clouds

Mostly Clear: Less than half cloud cover Mostly Cloudy: More than half cloud cover

Cloudy: Full cloud cover

## Type of habitat

**Agriculture:** Corn, soybean, small grain (oats, barley, wheat), alfalfa field. In addition to the crop do you observe any weeds or flowering nectar-producing plants?

**Wooded:** Windbreak in which trees are planted in line or row. A woodlot or riparian buffer strips – which have perennial plantings along streams, creeks, waterways consisting of trees, shrubs other perennial vegetation

**Waste Area:** Grass dominated roadsides in lowa typically planted to smooth brome. Some roadsides have considerable plant diversity, make sure to check for milkweed plants and flowering-nectar producing plants in these areas and estimate density by counting number of plants (should this be plants or stems?)

**Pasture, rangeland, CRP:** these areas may appear to be a meadow/prairie that is grass dominated but may contain plant species of interest: milkweed, flowering-nectar producing plants. These areas differ from agricultural lands because they are not replanted each year but are permanent or semi-permanent lands. They may contain wetlands and grass strips that facilitate water run-off from fields.
